EconoBeat
A comprehensive monthly dialogue on leading indicators

AUGUST 2021
IMF has slashed its growth forecast in Q2 2021 for several countries, including India, in the wake of the resurgence of cases and slow vaccination pace.

India’s growth rate has been revised to 9.5 percent in 2021 from 12.5 percent projected in April of this year – the highest cut amongst all countries.

However, despite the downward revision, India’s growth forecast remains higher compared to other major economies.

The recovery for India experienced a significant setback during the second wave, coupled with a slower inoculation pace. The growth estimate for 2022 is pegged at 8.5 percent.
After continuously breaching the central bank’s upper band of 6 percent for the last two months, India’s retail inflation eased to 5.59 percent in July 2021.

The CPI in urban areas was pegged at 5.82, a shade below the Reserve Bank of India’s tolerance level. Inflation in urban areas remained higher compared to rural areas (5.49 percent).

While some moderation was recorded in food items, prices for items such as oils and fats remained high. The high global crude oil prices continue to put upwards pressure on the fuel prices.

The WPI slowed down slightly to 11.06 percent in July 2021, compared to 12.07 percent in the preceding month. much softer than that recorded during the first lockdown.

Although the wholesale price-based inflation continues to see double-digit growth, it is easing from the all-time high recorded in May 2021.

Wholesale inflation remains high due to the low base effect and the high price of crude oil and manufactured products.

The Manufacturing Purchasing Managers Index (PMI), which reached 55.3 in July 2021, is at a three-month high after slipping below the critical threshold of 50 in June 2021.

The easing of restrictions has seen the industry bounce back from the lows as operation conditions, new orders, and exports improve.

Although the Services PMI continued to be in the contraction zone, it showed slight improvement and reached 45.4 in July 2021 compared to 41.2 in the previous month.

The business activity remained muted, and input costs increased further in July 2021. However, it declined at a much softer pace than that observed in July of this year.

According to PMI parlance, a reading above 50 indicates expansion, while below 50 indicates contraction.
The non-food credit growth was pegged at 5.9 percent YoY in June 2021, compared to 6.0 percent same period the previous year.

The credit in agriculture and allied services registered a YoY growth of 11.4 percent in June 2021, compared to 2.4 percent in the same period last year.

Growth in loans to the service sector decelerated to 2.9 percent YoY in June 2021, compared 10.7 percent in the year-ago period.

Personal loans grew by 11.9 percent in June 2021, compared to 10.4 percent a year ago.

The loans in the housing sector (including the priority sector) grew at 9.7 percent YoY in June 2021.
Industrial production saw a growth of 13.6 percent YoY in June 2021. In the same period last year, the IIP had contracted by 16.6 percent.

All sectors, except electricity, continued to record double-digit growth in June 2021.

The factory output measured by the index has been showing a sharp growth since March 2021 due to the favourable base owing to the national lockdown last year. However, the low base effect declined in June 2021 where IIP in all the allied activities has eased compared to the previous three months.
Consumer confidence remained weak and stood at 48.6 in July 2021, compared to 48.5 in May 2021. However, with the economy recovering from the impact of the second wave, the future sentiments of the consumers have returned to the optimistic zone. The future expectation index reached 104.0 in July 2021 after going into pessimistic zone (96.4) in May 2021. The optimistic sentiments were driven by substantial improvements in the general economic and employment situation. Corroborating with this, our consumer sentiment outlook survey for potential homebuyers also suggests that sentiments are optimistic for the coming quarters.
The unemployment rate eased further to 6.9 percent in July 2021, post the spike of 11.9 percent in May 2021 due to the peak of the second wave.

The unemployment in urban areas was 8.3 in July 2021 compared to 10.0 percent in the previous month.

The rural areas saw lower unemployment rates (6.3 percent) than the urban areas due to fewer coronavirus cases during the second wave and lower restrictions.

The opening up of activities, vaccination and improving high-frequency indicators are all pushing the demand, leading to a drop in the unemployment rate.
KEY UPDATE
DOMESTIC

Gati Shakti – INR 100 lakh crore plan to boost infrastructure

As announced on the 75th Independence Day of India, the government will soon unveil an INR 100 crore national master plan, ‘Gati Shakti’, to develop infrastructure and generate employment.

The plan is to lay the foundation for adopting a holistic and integrated approach in infrastructure construction. It is to bring coordination in the transport infrastructure across India to shorten travel time and aid in creating future economic zones.
